

PROJECT 2: MAP CU

Author: Jessie Albarian

Class: ATLS 4120

Location: [Github.com/albarianjess/MobileApps-Fall2015](https://github.com/albarianjess/MobileApps-Fall2015)

Objective: Create an iOS app that uses the MapKit iOS SDK framework. It will show a map of the University of Colorado Boulder with specific points marked on the map depending on user selection. Selections will be buildings, libraries, and cafes.

Features: Have two view controllers. A main view controller that shows the 'What are you searching for' picker view, and another view controller that shows the map. The map will have a back button and the user will be able to show the current location. There will also be an info button to change the map to Standard, Hybrid, or Satellite.
