Paws

Project 3 Proposal
Jessie Albarian
November 2015
ATLS4120 CU Boulder

Objective:

It all started when I wanted to get a kitten. I found myself going to the Boulder and Longmont Humane Society websites on my iPhone almost daily, looking for the perfect pet. I realized shortly after visiting the sites from my phone that not only were their websites not mobile friendly, it was a hassel to open a new window each time I wanted to search a different humane society. That same week, a good friend of mine actually visited the Boulder Humane Society for business and mentioned my idea of making an app. It turns out they loved the idea and want to support me in this!

For this project, by the end of the Fall 2015 semester, my goal is to have a working prototype that demonstrates the layout of the entire app with dummy content. I will have access to real data from the Boulder Humane Society's database once the prototype is created.

By the end of the Spring 2016 semester, my goal is to have the app close to finished. I want to get it reviewed and approved by the humane society.

Operating System: Android

Project 3 Goals:
1. Have an initial page that allows you to choose what type of pet you are looking for
2. Have a scrolling page that shows name of pet, an image, and a few lines of description (breed, age, sex, price, weight, ID#)

App Icon: Paw print

Sources:
1.   www.boulderhumane.org
2.   www.longmonthumane.org
3.   Michael V. Swisher created a python web scraper to access data from online
4.   Aileen Pierce's tutorials from class
